To All National Safety Code Safety Certificate Holders

RE: Updates to Profile Status Thresholds

To Whom It May Concern:

As described in NSC Notice #01-2015, on October 1, 2015 the National Safety Code (NSC) program office implemented changes to the carrier risk bands, intervention thresholds and profile status thresholds as part of the work that had been completed by the NSC Review Task Force. The intent of these changes was to more accurately reflect the level of risk indicated by a carrier's on-road safety performance.

In order to allow the NSC Program Office an opportunity to collect more data and review the threshold changes in more detail, the Conditional profile status thresholds have been temporarily adjusted effective December 1, 2015.

Carriers will now have a Conditional profile status if their score in any of the four areas (Contraventions, Accidents, Inspections, Total) are higher than 89% of carriers in their risk band. An Unsatisfactory profile status will still be triggered if a carrier's score in any of the four areas is higher than 95% of carriers in their risk band.

The intervention threshold scores have not been impacted by this change.

Non-Compliant Percentile	Intervention Triggered	Profile Status (Oct 1, 2015)	Profile Status (Dec 1, 2015)
95% to 100%	Audit	Unsatisfactory	Unsatisfactory
89% to 94%	Compliance Review	Conditional	Conditional
80% to 88%	Self-Directed Safety Plan Review	Conditional	Satisfactory
70% to 79%	Warning letter	Satisfactory	Satisfactory
0 to 69 %	None	Satisfactory	Satisfactory

A list of the current thresholds for all risk bands is available by contacting the NSC Program Office.
