

## What's New: VIP Online Inspection System Updates – January 2012

As part of CVSE's ongoing efforts to address your questions and continuously improve the VIP Online Inspection System, the system was updated in **January 2012**.

Below is a summary of the improvements and changes that have been made.

### 1. New Features

#### ✓ **New Notification Feature**

A real-time notification feature has been introduced. It will enable CVSE to rapidly communicate important information to Facilities and Inspectors through dynamic messages on the VIP Online Home page and eForm screens. Messages may include:

- 'What's New' information when updated features, manuals or forms are available
- Links to new or revised documents or web pages
- Notifications of planned VIP eForm system maintenance outages
- Alerts for unplanned system outages

#### ✓ **New Entry Method for Inspection Start and End Times**

The time, in addition to the date, when an inspection is started and completed is an important part of all inspections. To improve accuracy in recording this time component it must be entered in 24-hr format by either typing directly into the Time/Date field on the screen, or by clicking  to open the calendar feature then typing the correct time in the provided field then selecting the date.

### 2. Updated Report Forms

#### ✓ **Layout Improvements**

The layout for some fields has been adjusted to improve readability and ensure the Draft and Blank forms are consistent. Watermarks have been added to the Date/Time fields on the Blank and Draft forms to help ensure this information is recorded accurately when hand written.

#### ✓ **Draft Form Changes and Requirement to Enter All Final Reports into eForm**

Draft reports can still be printed and used to record information by hand during an inspection. However, the form now clearly states 'Draft' rather than 'Final' to conform with the requirement that the Final Report must be the same as that submitted to ICBC, which is submitted through the VIP eForm system.

### 3. Screen Changes and Enhancements

#### ✓ **Brake Measurements Now Optional for 'Other' Chamber Types**

To better accommodate all Chamber Type options, when the Brake Chamber Type is selected as 'Other', the entry of Brake Measurements is now optional.

#### ✓ **Capture of PVIP Pressure Fuel (Secondary) Inspector**

For consistency with CVIP and to ensure data accuracy, when the Pressure Fuel system on a private vehicle is inspected, the Inspector Number of the pressure fuel (secondary) inspector must be entered.

#### ✓ **Availability of Unibody Structural Integrity option on PVIP screens**

The option for Unibody Structural Integrity is now available to be selected on the PVIP screen 'Enter Inspection Item Results'.
