

DESIGN UPDATE - WEST PORTAL TO YOHO BRIDGE

— Possible Surface Alignment

EB = East Bound
WB = West Bound

Preliminary - Alignments Subject to Change

Design is proceeding on a surface route, requiring side-by-side 340-metre and 210-metre tunnels, approximately six hazard protection sheds and up to 12 bridges. Such a route can be built and made operational in stages, like the rest of the project.

Hazard protection sheds will protect against snow avalanche and rock fall hazards.
